About SPT

Sans Pareil Technologies, Inc. (SPT) is a software engineering firm engaged in designing and developing network software solutions for its customers. We are headquartered in Chicago, Illinois and also maintain an off-shore development centre in Thiruvananthapuram, India. We are in the process of setting up our European operations centre in London, UK.

About SPT

Sans Pareil Technologies, Inc. (SPT) is a software engineering firm engaged in designing and developing network software solutions for its customers. We are headquartered in Chicago, Illinois and also maintain an off-shore development centre in Thiruvananthapuram, India. We are in the process of setting up our European operations centre in London, UK.

SPT management team possesses combined experience of over 35 years in the Information Technology discipline and strives to incorporate the following core characteristics into its products and services.

Characteristics

- Superior
- Cost effective
- Flexible
- Robust
- Insightful
- Scalable
- Maintainable
- Cross platform

Service Philosophy

We do technical project management and planning, application architecture and design, and quality assurance in the United States. Labour intensive software development activities are primarily executed in our lower cost development centre and produce quality software solutions at lower cost to our customers.

Service Philosophy

We do technical project management and planning, application architecture and design, and quality assurance in the United States. Labour intensive software development activities are primarily executed in our lower cost development centre and produce quality software solutions at lower cost to our customers.

Our policy is to keep core business knowledge within the local market close to our customers helping us stay agile in meeting any emergency situations that may arise for our customer. This also facilitates efficient communication between the major project stakeholders at our customer as well as on our side.

Mission & Vision

Mission

Provide preferred, versatile, cost-effective and high quality internet and intranet solutions to streamline processes and help clients collaborate with their clients, suppliers, customers and partners effectively.

Mission & Vision

Mission

Provide preferred, versatile, cost-effective and high quality internet and intranet solutions to streamline processes and help clients collaborate with their clients, suppliers, customers and partners effectively.

Vision

To be a global leader in providing software applications and services based on Service Oriented Architecture (SOA) by utilising state-of-the-art standards based technologies and processes.

Services

- Web Application Development
- Web Services Development
- Desktop Application Development
- Content Management Systems
- Software Quality Assurance

Success Factors

- Requirements Analysis and Generation
- System Architecture and Design
- Application Prototyping and Development
- Software Quality Assurance (SQA)
- Application Implementation, Deployment and Support
- Software Reuse
- Open Source Software Utilisation
- Cross Platform Solutions

Web Applications

Sans Pareil Technologies, Inc. specialises in developing applications that can be delivered to its users over networks such as the internet or intranet. Application users can use the ubiquitous web browser as the tool to access these applications over the network.

Web Applications

Sans Pareil Technologies, Inc. specialises in developing applications that can be delivered to its users over networks such as the internet or intranet. Application users can use the ubiquitous web browser as the tool to access these applications over the network.

Sans Pareil Technologies, Inc. adopts the latest Rich Internet Application concepts and develops web applications powered by AJAX to present a rich responsive application to its users.

Web Applications

Sans Pareil Technologies, Inc. specialises in developing applications that can be delivered to its users over networks such as the internet or intranet. Application users can use the ubiquitous web browser as the tool to access these applications over the network.

Sans Pareil Technologies, Inc. adopts the latest Rich Internet Application concepts and develops web applications powered by AJAX to present a rich responsive application to its users.

In addition to offering users the capability to access their applications from anywhere in the world, web applications obviate the necessity of deploying software applications to personal computers across the organisation leading to enormous time and material savings in maintenance and upgrades.

Web Services

Web service is a software system designed to support machine-to-machine interaction over a network. Web services provide open standards based interoperability between various software applications and application components running on different platforms.

Web Services

Web service is a software system designed to support machine-to-machine interaction over a network. Web services provide open standards based interoperability between various software applications and application components running on different platforms.

Sans Pareil Technologies, Inc. uses open standards and protocols to develop web services. This cuts our costs and in turn provides customers with cost savings as well.

Web Services

Web service is a software system designed to support machine-to-machine interaction over a network. Web services provide open standards based interoperability between various software applications and application components running on different platforms.

Sans Pareil Technologies, Inc. uses open standards and protocols to develop web services. This cuts our costs and in turn provides customers with cost savings as well.

We enable you to easily combine disparate software and services and enjoy the experience of one integrated service. We make it possible to reuse services and components that are available in our customers infrastructure and save them money.

Desktop Applications

Sans Pareil Technologies, Inc. specialises in developing cross-platform desktop applications that access the services exposed over networks such as the internet or intranet by our middleware components or existing components developed by our customer.

Desktop Applications

Sans Pareil Technologies, Inc. specialises in developing cross-platform desktop applications that access the services exposed over networks such as the internet or intranet by our middleware components or existing components developed by our customer.

In addition to developing applications, Sans Pareil Technologies, Inc. also develops a comprehensive software revision management and deployment process to automatically update the client software once new versions of the application are ready for deployment.

Content Management Systems

The team at Sans Pareil Technologies, Inc. has worked on the development of various kinds of Content Management Systems (CMS) and have a combined experience of over 20 years in the field.

Content Management Systems

The team at Sans Pareil Technologies, Inc. has worked on the development of various kinds of Content Management Systems (CMS) and have a combined experience of over 20 years in the field.

CMS is the technology that provides customers with the means to create, store, manage, distribute and publish any content for business use.

CMS is the technology that provides customers with the means to create, store, manage, distribute and publish any content for business use.

Sans Pareil Technologies, Inc. helps our customers deploy CMS systems appropriate to the needs of the customer. We can configure and deploy simple CMS systems such as Wiki systems or full blown CMS engines depending upon the requirements of the customer.

Software Quality Assurance

Sans Pareil Technologies, Inc. provides Software Quality Assurance (SQA) services to companies that do not have in house SQA capabilities. Over a period of 15 years, we have been involved in studying, designing and implementing software solutions. Our staff has been involved in every level of the Software Development Life Cycle (SDLC) and through this experience has developed a systematic, planned set of actions necessary to provide adequate confidence to us and our clients that the software development process and/or maintenance process of a software system conforms to established functional and technical requirements.

Over a period of 15 years, we have been involved in studying, designing and implementing software solutions. Our staff has been involved in every level of the Software Development Life Cycle (SDLC) and through this experience has developed a systematic, planned set of actions necessary to provide adequate confidence to us and our clients that the software development process and/or maintenance process of a software system conforms to established functional and technical requirements.

Our SQA plan makes sure that the extent of proposed SQA activities also conform to the managerial requirements of keeping schedule and operating within client's budgetary constraints.

Technology Vision

Sans Pareil Technologies, Inc. believes in providing highest quality maintainable solutions to our customers at the lowest possible cost. We produce high quality products using our stringent, time-tested quality assurance processes and lower costs by utilising widely available start-of-the-art open source technologies. In addition Sans Pareil Technologies, Inc. actively develops and maintains a core API that helps us execute projects faster and at a net lower cost.

Project Execution Process

Sans Pareil Technologies, Inc. is committed to producing quality results and we expect the same kind of commitment from our customers. Our process ensures that we deliver products and services that exceed expectations.

Project Execution Process

Sans Pareil Technologies, Inc. is committed to producing quality results and we expect the same kind of commitment from our customers. Our process ensures that we deliver products and services that exceed expectations.

We at Sans Pareil Technologies, Inc. strive to involve ourselves with our customers from the point of idea generation right up to installation/conversion, operation and maintenance.

Project Execution Process

Sans Pareil Technologies, Inc. is committed to producing quality results and we expect the same kind of commitment from our customers. Our process ensures that we deliver products and services that exceed expectations.

We at Sans Pareil Technologies, Inc. strive to involve ourselves with our customers from the point of idea generation right up to installation/conversion, operation and maintenance.

We incorporate a log of highly defined, proven steps in between that ensure what comes out after process-flow execution is what we set out to achieve in collaboration with our customers. We stick to this same process flow for our internal projects to produce quality products and frameworks.

Benefits

Long term business relationship

Just a customer-supplier relationship is not good enough for us!
We try to build a long lasting relationship with our customers that is built upon trust, referrals and collaboration.

Benefits

Long term business relationship

Just a customer-supplier relationship is not good enough for us! We try to build a long lasting relationship with our customers that is built upon trust, referrals and collaboration.

Quality

It is evident from our project process-flow that we are serious about quality of our products and services. We at Sans Pareil Technologies, Inc. know that the only way to procuring repeat business is by ensuring and continuously improving quality, integrity and usability of our products.

Benefits

Experience

We have a collective experience of over 35 years in the Information Technology field. Our experience spans all aspects of the SDLC including development, quality assurance and systems management and maintenance.

Benefits

Experience

We have a collective experience of over 35 years in the Information Technology field. Our experience spans all aspects of the SDLC including development, quality assurance and systems management and maintenance.

Technology

We do business in one of the most competitive markets - the United States. Our use of the state-of-the-art commercial and open-source technologies to build products make us the ideal solution provider for our customer's requirements.

Benefits

Cost

Cost of our products and services is not something we want our customers to worry about. Although we do not compete purely on the basis of cost of products or services, we assure our customers that they will get the best quality product at a very attractive price by following simple rules.

Business Rules

- Reusing pre-tested components from our component library.
- Utilising lower cost development centres to lower our operating costs.
- Putting in place strict SQA activities right from the project planning phase.
- Utilising open-source software.
- Building extensible, scalable, and easily maintainable solutions.
- Cutting our costs.

Customers

Management Profiles

Rakesh Vidyadharan President & CEO

Rakesh possess wide experience with the various JEE (Java Enterprise Edition) technologies. Rakesh has worked for clients such as Tribune Media Services, Convergys Corporation, Blue Cross and Blue Shield and New York Life. Rakesh has handled responsibilities including software and system architecture, software design, software development, webservices definition and development, data modelling (RDBMS, ODBMS, and XML), systems management, and project management for various turnkey projects he was entrusted with. Rakesh is also a board member of the Chicago Java User Group and various other Java interest groups.

Management Profiles

Girish Venkitachalam, Quality Assurance

Girish has a proven track record spanning a period of 12 years in implementing and managing Quality Assurance activities in a variety of software fields. Prior to Sans Pareil Technologies, Inc., Girish has played individual and managerial roles at PTC, Vignette Corporation, and BladeLogic.
